

### List of unclear remedy names

This is a list of more than 850 remedy names that I found in manufacturers' lists and where the manufacturers could not answer the related questions. So what exactly is meant and sold under these names remains unclear.

The list is given here for two reasons: First for the users of the database to be able to find the remedy names and to know where they are sold and what the related problem of identification is. Second with the hope to get further aid or information as to the identity of these remedies, as we can hardly use substance of which we don't know what they are.

Any kind of information in this direction is greatly appreciated.

These remedies are NOT included in the database yet, because their identity is not certain and they cannot be located in the system.

AND those remedies are included here, that are mentioned in homeopathic literature with no clear identity. Here we have given the source under Questions and "none" under Manufacturer.

| REMEDY                                     | Questions   | Manufacturer |
|--|---|--------------|
| ABOU SIMBEL<br>Egyptian Remedy             | ? a stone from there?   | Ainsworths   |

| Panacea            | mentioned in Bradford's Index*, no indication of a species<br>This remedy of Mure's Brazilian provings has commonly been equated with Anagallis arvensis in homoeopathic literature. Actually Anagallis is a small herb occurring in Europe, whereas Mure is talking about a Brazilian tree. Although Mure is often not very exact he wouldn't confuse these plants. And he states clearly that he has lost his notes about the plant and only knows the local names. So we can be certain, that Mure's PANACEA is NOT Anagallis. In fact the true identity will remain unknown or subject to a closer research in Brazil in the places that Mure visited. | none       |

| Terror   | mentioned in Bradford's Index*<br>The original source is: "Neues Archiv für homöopathische Heilkunst, Hrsg. Stapf und Gross, Vol. 2, Heft 1, Leipzig 1845, S. 1: Dr. Attomyr - Die Affekte als Noxen und Heilmittel". But the original text makes clear that here the physiological effects of emotions is considered. And the author asks the question whether emotions (Affekte) could be isolated, e.g. in Mother's Milk and be given as remedies. All this has nothing to do with provings. And the remedies seem to have once been made tentatively by a Dr. Helbig, but this wasn't continued. | none          |
