Systematics of flowering plants according to Cronquist → APG III

here in the order of the „families“ in Sankaran’s system

(different tables: [alphabetical here](#), according to [Cronquist here](#) or according to [APG III here](#)).

Regarding the general problems of the systematics of flowering plants in homoeopathic use please see [Intro to Plants on provings.info](#).

On this page we are following the „families“ (actually different kinds of taxonomic groups) as Rajan Sankaran uses them in his systematic approach that is laid down in his “Insight into Plants”. There Sankaran is mainly following the systematic order of the first edition of my book “The Natural System of Remedies” from 1997, so an older taxonomy, that has been completely revised and is neither identical with Cronquist nor with APG as both only became prominent later. Therefore these “families” have always to be treated separately. Nevertheless the changes towards a genetically based systematic are mainly relevant for the work with the sensation method as the Hamamelidae, the Violales, the Geraniales und the Theales are concerned, which have all been scattered into completely different taxons.

Legend

an **x** in column A means: minor change from Cronquist towards APG III.

an **xx** in column A means: important change from Cronquist towards APG III.

an **xx** in column B means: a change that is essential for the systematic use within Sankaran’s family system.

= Adoxaceae /Dipsacales means: this family according to Cronquist is allocated as Adoxaceae in the order Dipsacales within the APG III, and so is not an independent family anymore there.

Those families that are [highlighted in blue](#) can be clicked on to go directly into the system of our website provings.info for further search.

„Family“ in Sankaran’s System	B	Familia	Ordo Cronquist	Subclassis Cronquist	A	Ordo APG III	next Taxon APG
Anaciadiaceae		Anaciadiaceae	Sapindales	Rosidae		Sapindales	Rosids: Eurosids II - Malvids
Apocynaceae		Apocynaceae	Gentianales	Asteridae		Gentianales	Asterids: Euasterids I - Lamiids
Araceae		Araceae	Arales	Arecidae	x	Alismatales	Monokotyledonae
Asclepiadaceae	xx	Asclepiadaceae	Gentianales	Asteridae		= Apocynaceae /Gentianales	Asterids: Euasterids I - Lamiids
